

Oil Tank Inspection Checklist

- Are the tank legs unstable or on an uneven surface?
- On the surface of the tank: Do you see rust, weeping, wet spots, or excessive dents.
- Around the oil filter or valves: Do you see any signs of leaks or drips?
- On the floor: Do you see any drips or wet spots?
- Do the oil lines run under concrete or above ground without being encased in protective tubing?
- Outside, is the tank's vent clogged or blocked with snow and ice?
- Is the tank's gauge stuck or frozen? Do you see any staining around the gauge?
- For outside tanks, are there any threats of snow or ice falling on the oil tank or filter?
- Is your tank more than 20 years old? (If you are unsure, we might have a record on that, so do [call us](#) to check).

If you checked off one or more of these items, [call us](#) for a professional FREE tank inspection. It is important to catch minor problems and fix them before they become huge headaches. [Call \(800\) 582-1580](tel:8005821580) our service department today and speak to Ralph to schedule an appointment.
